

SMART THERMOSTAT HM26RF5/16

DIGITAL THERMOSTAT

LARGE LCD DISPLAY EASY TO READ

2 CHANNEL DEVICE

OWD - OPEN WINDOW DETECTION MODE

INTEGRATED WITH ALEXA AND GOOGLE HOME

DESCRIPTION

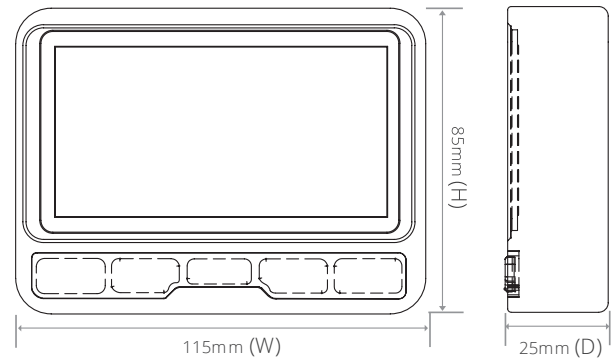

A wireless, programmable thermostat set is suitable for your water heating or electric heating system. The set is comprised of two parts, the Smart Thermostat, and The Receiver. Two devices are connected wirelessly to ensure a good wireless connected signal. We have added a signal testing function to make pairing easier. The wireless thermostat has 5 modes; automatic, manual, over-ride, holiday, ECO and off. The temperature setting is programmable and the time & date of heating zones are customisable. It is also equipped with Open Window Detection (OWD) as standard.

By adding the Smart Gateway (Wi-Fi Module) to the wireless programmable thermostat, the smart control function becomes a Wi-Fi connected device. If there is no gateway added it can be used as a normal wireless thermostat (RF). HM26RF + HM28HUB10 (Gateway) - when both modules are configured the HM26 is ready for Wi-Fi connectivity.

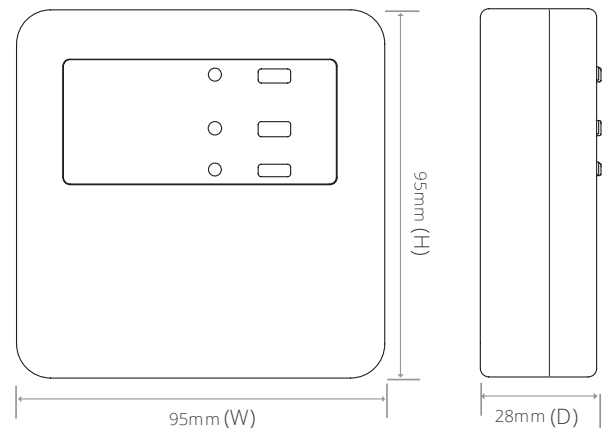

This unit comes with a 2 year warranty.

DIMENSIONS

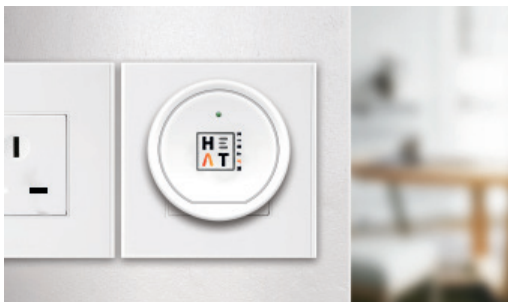

Thermostat

Receiver

HUB10

As a bridge for smart homes, the gateway HM28HUB10 provides an internet access port for remote smart control of low power smart products; it does not require a spare ethernet port on the user's home router, just plug it into the socket next to the wireless router and follow the quick and easy setup process.
