LST MODE (LOW SURFACE TEMPERATURE)

SMART OPEN WINDOW  
DETECTION

Colour shown: 7016 (Anthracite Grey, Matt)

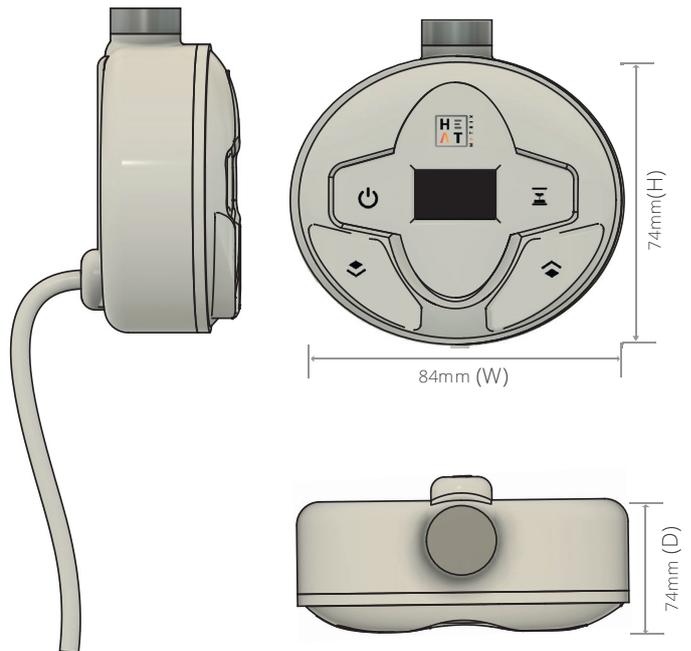

## DESCRIPTION

The HM55TRC04 smart towel rail controller is the newest model in our range and can be installed to any of our existing HM series towel rails.

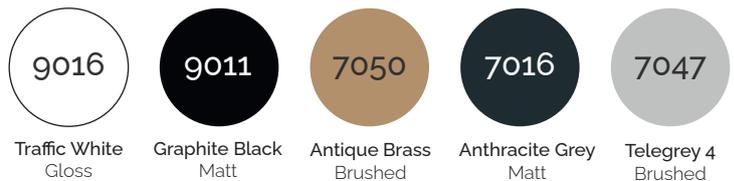

The controller can be operated entirely remotely using the intuitive app, which shows the selected mode and temperature adjustment, and a WiFi connection, or directly from the device using the soft touch buttons. These controls are easy to use and require minimal pressure to operate. The controller is equipped with 6 working modes: Manual, Program, LST, RBT (run-back timer), Comfort, and Setback. The LED display shows the selected mode, target temperature, or the run-back timer. Child lock mode is also standard with this model.

The HM55TRC04 has the option of being mounted horizontally or vertically, for example when being used in a dual-fuel application to an existing hydronic radiator with a horizontal inlet. The controller is available in a range of RAL colours shown on this data sheet. **This unit comes with a 2 year warranty.**
