## DESCRIPTION

A unique smart device for controlling electrical products such as electric panel heaters, towel rails, IR panels and gas boilers. This unit offers the ability to connect to WIFI for control of those products which specifically require this. The unit is also equipped with Open Window Detection as standard and it complies with the LOT20 directive. Additional options included with the unit are a floor probe to be used for controlling electric underfloor heating systems. The unit is also equipped with a built-in fuse spur protection circuit.

**This unit comes with a 2 year warranty.**
