DESCRIPTION

The HM53RBT04 towel rail controller is a long standing, reliable option amongst our range for bathroom heating control solutions.

The controller is operated entirely using the soft touch buttons on its face. These controls are easy to use and require minimal pressure to operate. The controller is equipped with 4 working modes: Standby, Heating, LST, and RBT (run-back timer). The LED display shows the selected mode, target temperature, or the run-back timer. Child/key lock mode is also standard with this model.

The HM53RBT04 comes as standard with open window detection which shuts off the heating when a temperature drop is detected to prevent the wastage of electrical energy, thus saving you money on your bills. The controller is available in a range of RAL colours shown on this data sheet. **This unit comes with a 2 year warranty.**
